

ADM recognizes the important contribution that US Dairy producers make to our nation's food supply. Even when faced with challenges from numerous directions, dairy producers have continued to keep cattle healthy, viable, and producing at peak performance levels. With the rapid pace of change in the dairy industry, producers are quietly yet continuously stepping up by adopting new technologies and management practices, improving productivity and efficiencies, and doing more with less.

ADM is committed to helping dairy producers maximize milk margins through individualized, innovative nutritional programs specific to their farm. We take a comprehensive approach; focusing on optimizing income over feed cost, and providing on-farm consultation to proactively address profit leaks. ADM is in the unique position with research assets and investment in modern feed manufacturing facilities to provide a one-stop portfolio of ingredients, proprietary technologies, risk management programs and services for all phases of the dairy herd. When you choose ADM, you're choosing a company with a vast array of expertise from commodities to cows and a worldwide network of experience. Partnering with ADM, is partnering with a company focused on your individual goals and providing solutions to achieve maximum milk margin in a sustainable manner.

ADM has a global perspective on the dairy industry, serving 27 countries with 107 feed production facilities and 13 applied research centers. From ADM laboratory and research assets to university collaboration and commercial on-farm validation, ADM takes a multi-disciplined approach to product development. The use of proven technologies, precisely balanced using state-of-the-art ration balancing software along with stringent ingredient quality assurance protocols helps maintain the integrity of your farm-specific formulas. This, in combination with expert on-farm, solutions-based consultation from the ADM Dairy Specialists Team, assures that you will receive optimal nutrition focused on meeting the productivity and health demands of your herd in a cost-effective, nutrient-efficient manner.

Exploring new feed  
technologies with proven  
and reliable results.

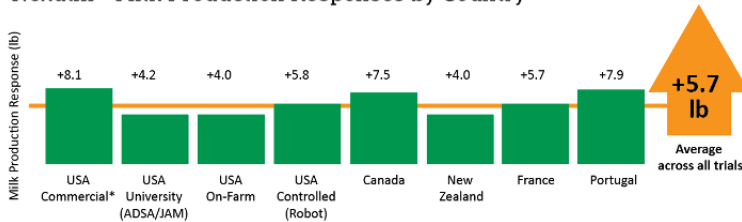

Addressing profit leaks  
with on-farm consultation  
for optimized farm  
profitability.

Proven technologies,  
stringent quality assurance,  
and precision ration  
balancing to meet your  
farm's unique needs.

## NEXULIN - AN EXAMPLE OF ADM INNOVATION IN ACTION

Nexulin is a proprietary ADM technology that optimizes the glucose metabolism in the cow promoting improved energetics for both milk production and health. Studies in the United States and abroad have shown that Nexulin provides a consistent and measurable response that is not diet dependent. It instead elicits a physiological response with consistent and repeatable results globally across management systems and diets whether it be in New Zealand, Portugal, France, Canada or the U.S.

Nexulin - Milk Production Responses by Country
